¹ Additional glyphosate products may be available, but this list contains many of the agricultural products.

² Glyphosate is generally formulated as one of the following salt molecules: IPA = isopropylamine, MA = monoammonium, K = potassium, DA = diammonium, or TMS = trimethylsulfonium; acid = glyphosate acid.

³ The concentration of glyphosate salts can be expressed in terms of pounds of glyphosate salt/gallon or pounds of glyphosate acid per gallon. Because the various salts have different weights, comparing glyphosate on an acid equivalence (ae) basis provides a better comparison of the herbicidal component of the different salts.

⁴ RR = Roundup Ready.
